14. Turn right onto gene stallings blvd
15. Go onto the sidewalk and walk towards the underground walkway
16. Turn left once no longer underground and walk straight
17. Continue straight until at rec centers front door

Discussion

1. Which set of your team's sequences of steps did you identify as being the best? Why?
 2. In what ways were the sets of sequences that were produced different?
 3. In what ways were the sets of sequences that were produced the same?
 4. Consider whether your choice of which of these would be the best set of instructions might change depending on the person following them. For example (you may think of other examples), would the best set change if:
 - a. The person following them was already very familiar with campus, or had never set foot on campus.
 - b. The person following the instructions was using a wheelchair, or the person following the instructions was interested in jogging.
 - c. The weather was dark and raining outside, or it's a beautiful and sunny 75 °F.
-
1. Gavin's since it is the most detailed
 2. Some people took the bus while others walked. Some people used buildings as markers while others used streets.
 3. Everyone used aggiemap to gain a bird's eye view of the campus. All started with exiting the classroom.
 4.
 - a. For people who are very familiar with campus, Josh's is the best because it uses streets and buildings as reference points. For people who aren't familiar with campus Gavin's instructions would be better because it uses a lot of streets as markers.
 - b. I think if someone was in a wheelchair I think Noah's directions would be best because his directions use the bus and the bus is wheelchair accessible.
 - c. Dark and raining use Noah's because it takes the bus so you will stay dry. When it is sunny use Gavin's because it is a nice walk.
